I . Decorative Moss Blocks

Type: Live Moss

Products:

- Leucobryum bowingii Mitt (Cushion moss 永生白发藓)
- Brachymenium 短绒藓
- Plagiomnium acutum 匍灯藓
- Dicranum scoparium Hedw. (Mood moss 曲尾藓)
- Hypnum plumaeforme (Sheet moss 大灰藓)
- Eurohypnum leptothallum (Fine/Small Sheet Moss 小灰藓)
- Thuidium Cymbifolium (Fern Moss 大羽藓)
- Racomitrium Canescens 星星藓
- Bryum Argentum Hedw 朵朵藓 (祛土)
- Racomitrium japonicum 东亚砂藓
- Preserved hypnum Plumaeforme (Sheet moss 永生大灰藓)
- Preserved eurohypnum 永生小灰藓
- Preserved leucobryum (Cushion moss 永生白发藓)
- Preserved dicranum (Mood moss 永生曲尾藓)
- Preserved thuidium (Fern Moss 永生大羽藓)

Material: Natural moss Color: Green (may vary due to lighting)

Features:

- Naturally pollution-free, providing ecological protection.
- Strong water absorption and moisture retention for plants and pets.
- Highly malleable for various designs.
- Enhances environment and purifies air.
- Long lifespan, easy to maintain.

Applications

1. Gardening Decoration

- Use: Courtyards, gardens, indoor bonsai, etc.
- Steps: Select moss block size, cut/splice as needed, press onto surfaces with water, mist regularly, avoid direct sun.

2. Wall & Roof Decoration

- Use: Green walls, rooftop gardens, indoor vertical greening.
- Steps: Adhere moss blocks with plant adhesive/nails, monitor humidity, mist regularly, protect from direct sun.

Moss Wall

Gardening Landscape

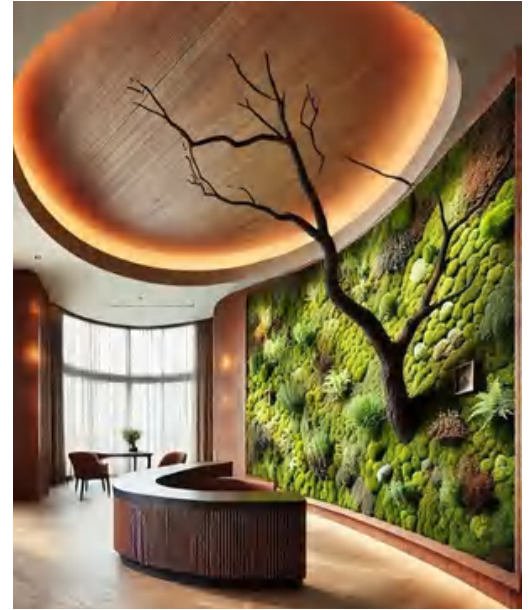

Our Cultivation Base

3. Air Purification

Applications: Indoor office spaces, home environments

How to Use:

- Place moss blocks in indoor flower pots or decorative panels to absorb harmful substances in the air through its natural plant function.
- Moss blocks can be placed in rooms with poor air circulation to increase humidity and help purify the air.
- Spray lightly with clean water every week to keep the moss active and its purification function.

Moss Wall & Green Decoration

- Use: Indoor/outdoor green walls, micro-landscapes.
- How to Use: Damp moss base, shape, mist for humidity.
- Maintenance: Keep moist, avoid direct sun, monitor for mold.
- Advantages: Strong retention, good aeration, eco-friendly, multifunctional.

Our Live Moss

Our live moss is produced via two complementary routes: carefully managed cultivation and responsibly wild-harvested stocks that we have domesticated and acclimated for consistent quality.

Each batch is hand-harvested in its natural state with no chemical treatment, then gently cleaned, graded, and packed to preserve vitality. Fresh moss serves both as the raw material for our preserved products and as a supply for propagation, ecological planting, and specialist horticulture. We maintain traceable sourcing and careful handling to ensure healthy, ready-to-use moss on arrival.

短绒藓

Preserved Moss

Preserved moss is natural moss treated through a professional preservation process to maintain its original texture, softness, and appearance. It requires no watering or ongoing maintenance, offers stable color over time, and can be cut or shaped to fit different design needs. Widely used for interior green walls, commercial displays, and decorative applications, preserved moss provides a clean, natural look with long-term visual consistency and low upkeep.

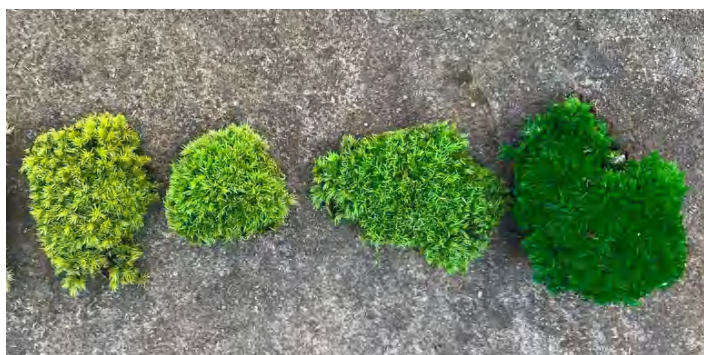

Preserved thuidium
(Fern Moss 永生大羽藓)

- Preserved Hypnum plumaeforme, Eurohypnum, Leucobryum, Dicranum, Thuidium — all preservable and color-stable.
- Retains natural texture and 3D structure; batch-consistent color.
- Choose natural palettes or request bespoke tinting.
- Live moss also available: Dicranum scoparium Hedw., Plagiomnium acutum, selected Brachymenium.
- Supply options: ready-to-install preserved panels or fresh moss for cultivation.
- Tailored quantities, careful packaging, reliable logistics.

Our preserved moss is made from premium fresh moss cultivated by EGS and processed with an in-house preservation technique developed by our team. This proprietary method ensures stable color, natural texture, and consistent batch quality.

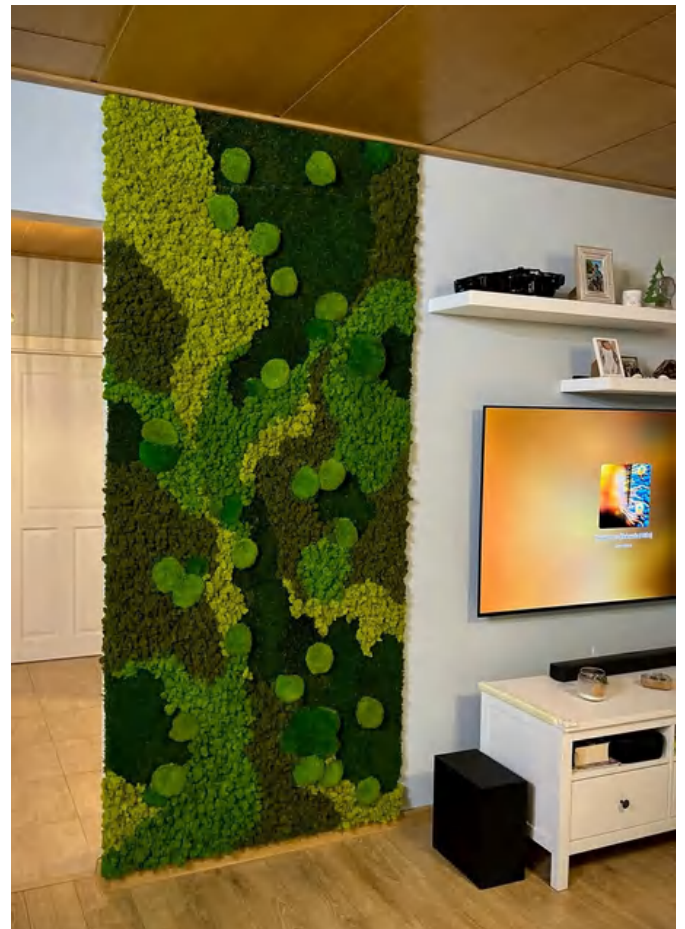

Preserved leucobryum
(Cushion moss 永生白发藓)

Preserved hypnum Plumaeforme
(Sheet moss 永生大灰藓)

Application of Preserved Moss

Preserved moss is natural moss that has undergone a professional preservation process to retain its original texture and tactile feel without the need for watering, fertilizing, or ongoing maintenance. It preserves the natural look and softness of live moss while remaining stable in color and form, making it an ideal material for interior green walls, decorative panels, floral applications, and art installations.

Moss's Impact on Carbon Emissions

Hypnum plumaforme and Eurohypnum leptothallum efficiently capture and sequester atmospheric CO₂ through photosynthesis, fixing roughly 1.2–2.7 kg CO₂ per m² each year. Applied as green coverings on aluminum roofs and exterior walls, these mosses quickly establish a stable vegetative layer in urban settings, boost building insulation, cut air-conditioning energy use, and further reduce carbon emissions.

Hypnum Plumaforme
大灰藓

Eurohypnum leptothallum
小灰藓

Moss doesn't need deep soil or complicated watering systems. Just lay a lightweight fiber mat on aluminum panels or a special growing layer and mist it now and then. It handles changing weather easily. Thanks to its "dry-and-revive" ability, the moss goes dormant during dry spells and bounces back after rain, cutting maintenance costs and labor.

Preserved Reindeer Moss

Our Premium Preserved Reindeer Moss features a naturally soft, fluffy texture and vibrant, long-lasting colors, making it an ideal choice for moss walls, interior landscaping, floral arrangements, terrariums, crafts, and DIY décor. Lightweight, versatile, and maintenance-free after preservation, it brings a natural aesthetic to any creative project.

Why Choose EGS Premium Preserved Reindeer Moss

- * Soft, fluffy texture with vibrant, long-lasting colors
- * Lightweight, maintenance-free, and easy to use
- * Ideal for moss walls, floral arrangements, terrariums, and interior décor
- * Perfect for DIY, crafts, and creative design projects

Premium Preserved Reindeer Moss

Enhance your creations with EGS Premium Preserved Reindeer Moss—carefully selected for its exceptionally soft texture, vibrant, long-lasting colors, and outstanding consistency. Ideal for moss walls, biophilic interiors, floral arrangements, retail displays, terrariums, and a wide range of decorative applications.

Backed by strict quality control, a reliable supply chain, and flexible OEM/ODM services, EGS delivers premium preserved Reindeer Moss trusted by customers worldwide. We are committed to providing consistent quality, dependable supply, and customized solutions for both commercial and creative projects.

II . Moss Balls

Kokedama, meaning "moss ball" in Japanese, is a traditional gardening art form that involves wrapping a plant's root system in a mixture of soil and clay to create a round ball, which is then covered with moss.

Key Features:

1. **Aesthetic Appeal:** Moss Ball serves as an attractive decoration for indoor spaces or gardens, bringing a touch of nature indoors.
2. **Variety:** Various plants can be used, including succulents, ferns, and ornamental plants.
3. **Easy Maintenance:** Requires regular watering, making it suitable for busy individuals.
4. **Eco-Friendly:** Emphasizes the connection between nature and plants, promoting environmental awareness.

Moss Ball is both beautiful and functional, and ideal for various settings and spaces.

III. Sphagnum Moss

Product Name: Sphagnum Moss Origin: China Grade: 2A-5A Specifications: - Dry/Wet (varies) - Sizes: Regular (150g, 500g, 5kg, 10kg), Super Compressed (150g, 300g, 500g, 1kg), Mini (6g, 10g, 15g, 20g) Color: Light brown (dries yellowish-brown) Material: Cultivated Sphagnum Moss

Product Introduction

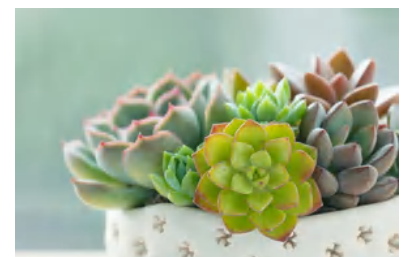

Chinese sphagnum moss, which grows in high-altitude wetlands, is excellent for gardening and reptiles/amphibians care due to its high water retention, organic content, and natural antibacterial properties.

Applications

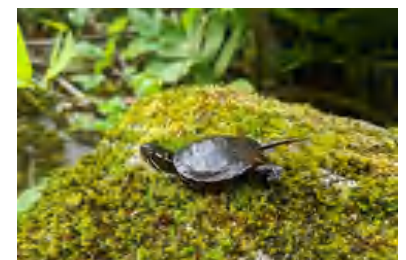

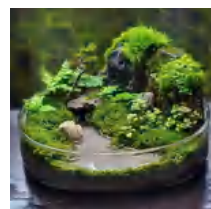

1. Gardening & Plant Cultivation

- Use for orchids, ferns, succulents, etc.
- As medium: soak, squeeze, pot.
- As cover: spread for moisture.
- For seedlings: enhance germination.

2. Air Plant Cultivation

- Wrap roots for humidity.
- Mist regularly.

3. Reptile & Amphibian Substrate

- Spread for humid habitat.
- Replace regularly to avoid mold.

IV. Sphagnum Moss Mat for Pets

Product Name: Sphagnum Moss Mat

Size: 30cm×20cm

Types:

1. Pure Sphagnum Mat
2. Mixed Moss Mat
3. Double-Sided Moss Mat

Materials:

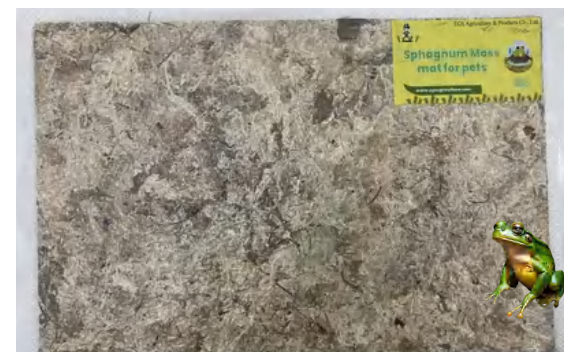

- Sphagnum Moss: Cultivated, excellent moisture absorption.
- Green Moss: Natural, soft, skin-friendly.

Features:

- Moisture retention, natural, eco-friendly, antibacterial, mold-resistant, soft, and comfortable.

Characteristics:

1. Pure Sphagnum Mat: 100% natural, good aeration, ideal for humidity control.
2. Mixed Moss Mat: Good moisture retention, increased comfort.
3. Double-Sided Mat: Sphagnum and green moss, choice of surface, softer side with green moss, and suitable for high humidity and comfort needs.

Applications

1. Reptile & Amphibian Bedding

Applications: Frogs, toads, salamanders, lizards, turtles, insects.

How to Use:

- Lay mat on box bottom, cut to size, leave space for movement.
- Spray water lightly after laying for moist effect.
- Check moisture daily/alternate days, spray if needed.

2. Cleaning & Replacement of Bedding

Frequency: Every 1-2 weeks or as needed.

Steps:

- Remove and rinse bedding with clean water; avoid chemicals.
- Dry before reuse; replace if moldy or smelly.

3. Pet Behavior Observation

- Watch for preferences in mat materials, especially for double-sided mats.
- Ensure moist, comfortable environment for pet well-being.

Suggestions:

Humidity Control: Maintain moisture for pets needing humid environs; monitor with humidity equipment.

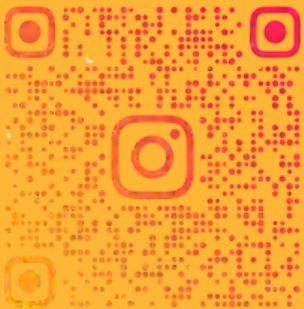

Environmental Hygiene: Regularly clean/replace bedding despite natural antibacterial properties.
